

Picture this... **Cscape with Symbols** New, Optional 4,000+ Graphical Symbol Library

Now you can enhance your OCS color-touchscreens with even more graphics. *Cscape with Symbols* is an optional software component that's completely integrated with *Cscape 6.0b* to add more graphic capability...over 4,000 full-color, scalable symbols to choose from. Pictures help make screens easier for users to quickly read through and follow instructions. They also quickly illustrate concepts that can be universally understood...which certainly helps bridge language boundaries when that is an issue.

Create an Industry-Specific Look on Screen

Cscape has always allowed you to add your company's logo to your OCS screen. But with this extensive library of symbols, you can now customize your OCS color-touchscreen to the look of your specific industry...everything from chemical to heating, food, and more. Up to *64 available categories!* [Download the complete symbol list \(in PDF format\)](#).

Easy-To-Use

It's simple to use, too. Just place a bitmap or animated bitmap object as before. An option will appear in the dialog box to "Select Symbol." From there you scroll down to find the symbol you want to use and adjust its properties. Once inserted, the symbol can be moved and/or scaled like any other bitmap object.

***Cscape with Symbols* Available via Download or CD-ROM**

A great value, *Cscape with Symbols* is yours for only \$99 when downloaded. Or, you can buy it on a CD-ROM for just \$165. Because the symbol library is a licensed product, Horner APG is not authorized to place it on the Web to download free. However, *Cscape 6.0b* (without Symbols) will continue to be made available to download at no charge. Please visit our [Cscape download page](#) to get a free copy of *Cscape 6.0b*, or to purchase *Cscape with Symbols*.

Plus, *Cscape 6.0b* Offers So Much More!

In addition to the optional symbol library, significant functionality has been added to the *Cscape 6.0b* software---which enhances the entire OCS product line. And in the near future, an Ethernet firmware revision will support programming over Ethernet.

Take a look at Cscape's great features:

- **High-Resolution Color-Touch OCS Units (OCS451, OCS551 and OCS651)**

These products feature 800x600 resolution and 32,000+ colors. And, programs are easily moved across all SVGA Color-Touch OCS models.

- **SmartStix I/O**

This is a new DIN-rail Remote I/O system that expands the application and affordability of OCS. *Cscape 6.0b* supports this new I/O family with a simple, easy-to-use interface. Best of all, no complicated fieldbus-style configuration is required.

- **And, all this too:**

FOX100 Expansion I/O Support
Font-editor (Graphical Units Only)
CompactFLASH (CF) Support for SVGA Units
Enhanced Modem Dial-out
Multiple Language Support (Color-Touch Only)

Get the Best of Both Worlds, Cscape 6.0b...with Symbols
