Powerful New Series 90-30™
Communications Module

DeviceNet™ Master Communications

The **HE693DNT350** DeviceNet Master module is new communications module for the GE Fanuc Series 90-30 PLC. This new product offers a significant performance upgrade over the existing model, and while configured in a similar fashion, the DNT350 has more configuration options. The DNT350 has significantly increased system performance through the use of a more efficient technique for polling slave devices. It also features a higher performance microprocessor and adds support for the Bit-strobe connection. *All models available to ship now!* Download our [New Product Bulletin](#) to get more details about this exciting new product.

Suggested List: \$1495.00US

Wide variety of 90-30 I/O always available!

Do you know that developing proprietary I/O for automation leaders has long been our bread and butter at Horner APG? Dozens of I/O products are specifically available for GE Fanuc PLCs and other PLC manufacturers. Download our [Literature Request](#) form and request BRO-90 for more information.

Capture that OEM!

One of Horner APG's strengths is our ability to respond to OEM needs for custom I/O modules. If you've got a great opportunity for a customized Series 90-30 product --- give us a call! Use *our* skills to give *you* an advantage over the competition!
